IN THE SPECIFICATION

Please amend the first full paragraph on page 6 of the specification as follows.

A collector tubing segment 19 extends from a collector tubing leg 5b of the tubing bifurcation 5 and may be continuous with or a separate element with respect to the tubing bifurcation 5. An indicator unit 18 of the device 1 includes a volumeter tubing segment 20 which is provided in fluid communication with the collector tubing segment 19. The indicator unit 18 may be removably attached to the collector tubing segment 19 by a tubing connector 21, which may include a receiver element 22 provided on the collector tubing 19 and an insertion element 23 provided on the volumeter tubing segment 20, as shown.

When it is inserted in the receiver element 22, the insertion element 23 defines a fluid-sealed end of the indicator unit 18 in which fluid is incapable of escaping from the interior to the exterior of the indicator unit 18 through the tubing connector 21.
